

# Package ‘fbi’

February 16, 2020

**Type** Package

**Title** Factor-Based Imputation and FRED-MD Data Set

**Version** 0.1.0

**Date** 2019-12-10

**Author** Yankang (Bennie) Chen [aut, cre],  
Serena Ng [aut],  
Jushan Bai [aut]

**Maintainer** Yankang (Bennie) Chen <yankang.chen@columbia.edu>

**Description** Factor-Based imputation of missing values in panel data and manipulation of the FRED-MD Data Set. It estimates the factor model in the panel data based on the methods in Bai and Ng (2002) <doi:10.1111/1468-0262.00273> and Bai and Ng (2017) <doi:10.1016/j.jeconom.2019.04.021>. It then computes the missing values using the Tall-Wide method (Bai and Ng (2019) <arXiv:1910.06677>) or the Tall-Project method (Bai, Cahan, and Ng (2019), unpublished manuscript). It also facilitates loading, preparing, and interpreting the FRED-MD data set <<https://research.stlouisfed.org/econ/mccracken/fred-databases>>.

**Depends** R (>= 3.5.0)

**Imports** stats, readr, pracma

**License** GPL-3 + LICENSE

**Encoding** UTF-8

**LazyData** true

**RoxygenNote** 7.0.2

**Suggests** knitr, rmarkdown

**VignetteBuilder** knitr

fbi-package	<i>Factor-Based Imputation and FRED-MD Data Set</i>
-------------	---

---

**Description**

The fbi package contains functions to estimate factor models and impute missing data based on factor models. It also includes functions to load and prepare the FRED-MD data set.

**Details**

See vignette("factor\_fred", package = "fbi") for an example using the FRED-MD dataset (<https://research.stlouisfed.org/econ/mccracken/fred-databases/>).

**Author(s)**

---

apc	<i>Factor Model of Balanced Panel Data</i>
-----	--

---

**Description**

apc estiamtes the factor model of a given balanced panel data.

**Usage**

apc(X, r)

**Arguments**

- x a matrix of size T by N.
- r integer, indicating the maximum number of factors.

**Value**

a list of elements:

Fhat  
Lamhat  
d  
d0  
ehat

**Author(s)**

Yankang (Bennie) Chen <yankang.chen@columbia.edu>  
Serena Ng <serena.ng@columbia.edu>  
Jushan Bai <jushan.bai@columbia.edu>

---

demeanXY	<i>Demean Panel Data</i>
----------	--------------------------

---

**Description**

demeanXY demeans the panel data.

**Usage**

demeanXY(X, N, T, N0, T0)

**Arguments**

X	detaframe or matrix of the original panel data.
N	integer, total number of columns of the panel data.
T	integer, total number of rows of the panel data.
N0	integer, the number of columns in the panel data with full data availability.
T0	integer, the number of rows in the panel data with full data availability.

**Value**

a list of elements:

X1	demeaned data
FE	estimated fixed effects matrix

**Author(s)**

---

describe	<i>Describe selected variables in the FRED-MD Data Set</i>
----------	--

---

### Description

describe provides a description of the selected variables in the FRED-MD data set.

### Usage

```
describe(varname, name.only = TRUE, verbose = FALSE)
```

### Arguments

varname	string or a vector strings of the format "X1" to "X135".
name.only	logical. If TRUE, return a dataframe with variable names and types of transformation only; if FALSE, return a dataframe with more details.
verbose	logical, indicating whether or not descriptions should be printed.

### Value

a vector of variable names, or a data frame with detailed descriptions.

### Author(s)

Yankang (Bennie) Chen <yankang.chen@columbia.edu>

### References

Michael W. McCracken and Serena Ng (2015), *FRED-MD Updated Appendix*. [https://s3.amazonaws.com/files.fred.stlouisfed.org/fred-md/Appendix\\_Tables\\_Update.pdf](https://s3.amazonaws.com/files.fred.stlouisfed.org/fred-md/Appendix_Tables_Update.pdf)

### Examples

```
library(fbi)
varnames <- describe(c("X32", "X56"), name.only = TRUE, verbose = FALSE)
```

---

fredmd	<i>Loading FRED-MD Data Set</i>
--------	---------------------------------

---

### Description

fredmd loads the official FRED-MD data set and provides a few tools to manipulate the data set.

### Usage

```
fredmd(date_start = NULL, date_end = NULL, transform = TRUE, local = FALSE)
```

**Arguments**

<code>date_start</code>	Date or NULL, the start date (included) of the data selection. If NULL, select till the latest data available.
<code>date_end</code>	Date or NULL, the end date (included) of the data selection. If NULL, select up to the earliest data available.
<code>transform</code>	logical, indicating Whether or not the FRED-MD data set should be transformed according to the transformation code.
<code>local</code>	logical, indicating Whether or not the FRED-MD data set should be loaded from the local files or downloaded online

**Value**

a subset of the (transformed) FRED-MD data of class `fredmd`.

**Author(s)**

Yankang (Bennie) Chen <yankang.chen@columbia.edu>

**References**

Michael W. McCracken and Serena Ng (2015), *FRED-MD and FRED-QD: Monthly and Quarterly Databases for Macroeconomic Research*. <https://research.stlouisfed.org/econ/mccracken/fred-databases/>

**Examples**

```
library(fbi)
data <- fredmd(date_start = NULL, date_end = NULL, transform = TRUE, local = FALSE)
```

---

<code>fredmd_description</code>	<i>FRED-MD Data Set Description</i>
---------------------------------	-------------------------------------

---

**Description**

A description of the FRED-MD data set.

**Usage**

```
data(fredmd_description)
```

**Format**

A data frame with 135 rows and 9 variables. The variables are as follows:

**id** series ID number

**tcode** code of transformation

**ttype** type of transformation

**fred** variable name used in the FRED-MD data set

**description** description of the series

**gsi** variable name used in the Global Insights Basic Economics Database (GSI)

**gsi:description** description of the series in GSI  
**group** group of the series  
**edited** logical, indicating if the data has been edited  
**varname** "X" + id

### Source

The fredmd\_description data were obtained from Michael W. McCracken and Serena Ng (2015), *FRED-MD Updated Appendix*. [https://s3.amazonaws.com/files.fred.stlouisfed.org/fred-md/Appendix\\_Tables\\_Update.pdf](https://s3.amazonaws.com/files.fred.stlouisfed.org/fred-md/Appendix_Tables_Update.pdf)

---

removeFE	<i>Remove Fixed Effects from the Panel Data</i>
----------	---

---

### Description

removeFE removes fixed effects from the panel data.

### Usage

```
removeFE(X, N, T, N0, T0)
```

### Arguments

X	detaframe or matrix of the original panel data.
N	integer, total number of columns of the panel data.
T	integer, total number of rows of the panel data.
N0	integer, the number of columns in the panel data with full data availability.
T0	integer, the number of rows in the panel data with full data availability.

### Value

a list of elements:

X1	demeaned data
FE	estimated fixed effects matrix

---

rm_outliers.fredmd	<i>Remove outliers of the FRED-MD Data Set</i>
--------------------	--

---

**Description**

rm\_outliers.fredmd removes outliers of the FRED-MD data set produced by the [fredmd](#) function.

**Usage**

```
rm_outliers.fredmd(object)
```

**Arguments**

object            an object of class [fredmd](#).

**Value**

FRED-MD data of class fredmd with outliers removed.

**Author(s)**

Yankang (Bennie) Chen <yankang.chen@columbia.edu>

**References**

Michael W. McCracken and Serena Ng (2015), *FRED-MD and FRED-QD: Monthly and Quarterly Databases for Macroeconomic Research*. <https://research.stlouisfed.org/econ/mccracken/fred-databases/>

**Examples**

```
library(fbi)
data <- fredmd(date_start = NULL, date_end = NULL, transform = TRUE)
newdata <- rm_outliers.fredmd(data)
```

---

rpca	<i>Estimation of Approximate Factor Models</i>
------	--

---

**Description**

rpca estimates the approximate factor models of the given matrix.

**Usage**

```
rpca(X, kmax, standardize = FALSE, tau = 0)
```

**Arguments**

X	a matrix of size T by N.
kmax	integer, indicating the maximum number of factors.
standardize	logical, indicating Whether or not X should be centered and scaled.
tau	numeric, specifying the parameter in the rank-regularized estimation. If $\tau = 0$ , then rank regularization is not used.

**Value**

a list of elements:

X  
 kmax  
 standardize  
 tau  
 ic2  
 pc2k  
 pc20  
 Fhat  
 Lamhat  
 Chat  
 Sigma  
 IC2  
 PC2k  
 PC20  
 fhat  
 lamhat  
 d  
 d0

---

se.rpca	<i>Standard Error of <math>C^{\text{hat}}</math></i>
---------	--

---

**Description**

se.rpca produces the estimated standard error of  $C^{\text{hat}}$  produced by the [rpca](#) function.

**Usage**

```
se.rpca(object, xpoints, qq)
```

**Arguments**

object	an object of class <a href="#">rpca</a> .
xpoints	placeholder.
qq	placeholder.

**Value**

standard error of  $C^{\text{hat}}$

---

tnt	<i>Estimate Treatment Effect</i>
-----	----------------------------------

---

**Description**

tnt estimates the treatment effect.

**Usage**

```
tnt(data, param)
```

**Arguments**

data	list containing x1, x2, y0, y1, N0, N1, T0, and T1.
param	list containing K, r, do_FE, do_IFE, and maxit1.

**Value**

a list of elements:

est

SE

V

it1

**Author(s)**

---

tp\_apc

---

*Tall-Project Imputation of Missing Value in Panel Data*

---

**Description**

tp\_apc imputates the missing values in a given panel data using the method of "Tall-Project".

**Usage**

```
tp_apc(X1, r1, center = FALSE, standardize = FALSE, re_estimate = TRUE)
```

**Arguments**

X1	a matrix of size T by N.
r1	integer, indicating the maximum number of factors.
center	logical, indicating Whether or not X1 should be demeaned
standardize	logical, indicating Whether or not X1 should be scaled.
re_estimate	logical, indicating Whether or not output factors, 'Fhat', 'Lamhat', and 'Chat', should be re-estimated from the imputed data.

**Value**

a list of elements:

Fhat

Lamhat

Chat

data

**Author(s)**

---

tw\_apc

---

*Tall-Wide Imputation of Missing Value in Panel Data*

---

**Description**

tw\_apc imputates the missing values in a given panel data using the method of "Tall-Wide".

**Usage**

```
tw_apc(X1, r1, center = FALSE, standardize = FALSE, re_estimate = TRUE)
```

**Arguments**

X1	a matrix of size T by N.
r1	integer, indicating the maximum number of factors.
center	logical, indicating Whether or not X1 should be demeaned
standardize	logical, indicating Whether or not X1 should be scaled.
re_estimate	logical, indicating Whether or not output factors, 'Fhat', 'Lamhat', and 'Chat', should be re-estimated from the imputed data.

**Value**

a list of elements:

Fhat

Lamhat

Chat

data
